M2 Chemical and microbiological characterization for environmental issues

Component
Université de
Pau et des
Pays de l'Adour
(UPPA)

Language(s)
English

Presentation

Strongly increasing societal demand in the fields of Environment, Sustainable Development, and Health, implies a synergy of advanced skills in Chemistry and Biology Sciences. In order to be able to effectively respond to this demand and to implement innovative solutions providing efficient answers to these requests, it is essential to perfectly understand the interaction of contaminants with living organisms and particularly their structures, properties, reactivities/activities in natural ecosystems.

The “**Chemical and Microbiological Characterization for Environmental Issues**” (CMCEI) second-year course of the Master in Chemistry and Life Sciences aims to train specialists with knowledge of the most recent advances in analytical chemistry, physics-chemistry, molecular biology, and environmental microbiology.

Objectives

Entirely taught in English, the first semester is devoted to the knowledge of contaminants cycles and to the application of different techniques for the analysis of

chemical elements and species of interest in various compartments of the environment, the identification of microorganisms presenting a risk to the environment or public health, but also quality assurance, critical evaluation of scientific publications and /or technical documentation.

The second semester consists of an 18- to 24-week research placement in the field of chemical and/or biological analysis applied to the environment in IPREM teams.

The course is mainly taught through project-based scenarios which help students understand the scientific approach in research. It also makes them put into practice various techniques and reflect further on their professional project.

Your university

Skills

At the end of this program, the students in the «**Chemical and Microbiological Characterization for Environmental Issues Master**” will be able to:

- * Show expertise in modern techniques in chemistry, molecular biology, and microbiology
- * Synthesize technical and research documentation to produce a technical study

- * Plan and define a research or R&D project in analytical chemistry, molecular biology, microbiology, or environmental survey
- * Manage and carry out a project
- * Manage field experiments to estimate the efficiency of chemical or biological methods for the protection of the ecosystems
- * Interpret and validate results of chemical and biological analysis
- * Produce a summary report describing the experiments done, the applied methods used, and the results obtained

Additional information

Scholarships

- * Region Aquitaine Scholarships for non-EU students
- * EIFFEL Scholarship of Excellence
- * Specific Master's scholarship

Organisation

Organization

SEMESTER 1 from September to January		
Field	Course	ECTS
Language	English or French as a Foreign Language	2
Data analysis	Statistical tools-project	4

Molecular biology	* Molecular Biology Technological applications (EC3) (6.0 crédits ECTS)	6
and		2
environmental microbiology	* Microbial biotransformation and environmental applications - conferences (EC1) (2.0 crédits ECTS)	4
	* Microbial biotransformation and environmental applications - project (EC2) (4.0 crédits ECTS)	
Quality	Quality assurance for analysis	2
Environmental Chemistry	* Trace element biogeochemical cycles	2
	* Speciation concepts	2

	and analysis * Biological Macromolecules Characterization * Imaging techniques for environmental samples and materials characterization	2
Ecology	Molecular Ecology (2.0 crédits ECTS)	2
Analytical chemistry	* Analytical methods performances evaluation (2.0 crédits ECTS)	2
	* Advanced analytical chemistry : organic contaminants analysis (EC1) (2.0 crédits ECTS)	2
	* Advanced analytical chemistry : electrochemical sensors (EC2) (2.0 crédits ECTS)	2
	* Advanced analytical	2

	chemistry : Advanced spectrometric techniques-coupling (EC3) (2.0 crédits ECTS) * Advanced analytical chemistry : Adsorption separation techniques (EC4) (2.0 crédits ECTS)	
Research tools and applications	* Environmental engineering project * Scientific papers and documentation critical evaluation (2.0 crédits ECTS)	4 2

SEMESTER 2 From January to June		
Fields	Course title	ECTS
Internship	Internship	30

Trainings

Internship : Mandatory

Intership duration : 6 months

Admission

Admission requirements

Academic requirements

Applicants must hold at least a 4-year university level in chemistry and/or biology fields.

The M2 CMCEI is open to students who have completed an M1 (4-year degree) in " **Chemistry and Life sciences**" (SAVE), "**Molecular Biology and microbiology for the environment**" (BME), or an equivalent level.

For students outside the UPPA, integration in the second year is subjected to a selection of curricula with equivalent training levels and with sufficient skills in biology, chemistry, and environment (Molecular biology, bioinformatics, microbiology, environmental microbiology, ecotoxicology, biostatistics, field sampling, and data processing, physical-chemistry, analytical chemistry, environment).

Graduate Program Green - Environmental Analytical Chemistry and Microbiology

In 2022-2023, the UPPA is opening a 5-year integrated Master's/PhD program that provides research-intensive training in multiple fields, called the Graduate Program GREEN (GRaduate school for Energetic and Environmental iNnovation). Several courses of study taught entirely in English are part of this program. The Graduate Program GREEN is open to high-potential students from a variety of scientific backgrounds who have completed their undergraduate training with the highest honors. To be selected, candidates must explicitly indicate in their letters of motivation their desire to integrate the Graduate Program GREEN, providing reasons for why they wish to participate in this research-focused PhD-Track.

English Language requirements

Applicants must be fluent in English, both in writing and speaking. An applicant whose native language is not English has to take a recognized international English test.

Minimum required score: **CECRL B2** | level in English

French Language Requirements

None: French language courses are included in the formation.

How to apply

Tuition Fees and partial exemptions

Administrative tuition in France is determined at a national level. The French Ministerial Order of April 19, 2019, amended on June 9, 2020, sets university tuition for a Master's Program as follows: European nationals: **€243**, extra-European nationals: **€3770**.

For the academic year 2022-2023, the Board of Directors has extended its policy of automatically providing a **partial reduction of these fees at the UPPA**. As a result, extra-European nationals will be granted automatic partial reductions such that **they will be able to pay the same enrollment fees as European nationals**.

Extra fees:

In addition to academic tuition, most students must pay a student body fee (CVEC, which cost €92 in 2020-2021).

*NB: Admitted candidates in any course of study who have taken a break of more than two years from their studies will enroll via the UPPA's **Continuing Education service** (Formation Continue / FORCO). They are exempt from the CVEC, however, they may be subject to a different tuition scale.*

And after

Professional insertion

Sectors:

- * Environment
- * Agribusiness
- * Analytical Chemistry
- * Chemical industries
- * Biotechnology

Fields:

- * Research and Development, quality control

Positions:

- * Academic positions
- * Researchers (public institutes or private companies)
- * Research and Innovation Engineers
- * Ph.D. students
